PRATIK PATIDAR

Frontend Engineer · React.js · TypeScript · Next.js · SvelteKit · Tailwind CSS

Indore, India · pratikpatidar7990@gmail.com · +91-8269647990 · LinkedIn · GitHub · Portfolio

PROFESSIONAL SUMMARY

Frontend engineer with about 1.5 years building production features on a B2B SaaS platform for enterprise procurement and supplier management, mainly in React, Next.js (App Router), and TypeScript, with some SvelteKit. I take features from Figma handoff through API integration, code review, and release, working closely with backend developers and QA along the way. I've also built a full-stack project on my own, from data model to deployment.

EDUCATION

B.Tech, Computer Science & Engineering — Barkatullah University, Bhopal · CGPA: 7.89 — 2020 – 2024

TECHNICAL SKILLS

Frontend	React.js, Next.js (SSR / App Router), SvelteKit, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Responsive Design
State & Forms	Redux, Context API, React Hook Form, Zod
APIs & Backend	REST API Integration, JWT Authentication (HttpOnly), Node.js, NestJS, MongoDB
Testing	Jest, React Testing Library, Manual Testing, Test Case Writing, Cross-browser Testing (Chrome, Firefox, Safari)
Accessibility	Semantic HTML, ARIA labels, keyboard navigation, WCAG guidelines
Tools	Git, GitLab CI/CD, Vite, npm, ESLint, Postman, Figma, Jira, Code Reviews, Agile/Scrum, Chrome DevTools, Claude Code, Cursor
Performance	Lazy Loading, Code Splitting, Dynamic Imports, Virtualization, Lighthouse

PROFESSIONAL EXPERIENCE

Frontend Engineer – Techstuff Private Limited — May 2025 – Present

- Build features on Mercanis, a B2B SaaS platform used daily by enterprise procurement teams, covering dashboards, scheduling, configuration, supplier management, and form-heavy data entry screens.
- Built and maintain a shared component library of 20+ components used across the platform's modules, which cut down repeated work on new screens and kept UI behavior consistent.
- Cut the initial JS bundle size by about 40% using lazy loading, code splitting, and dynamic imports, and added virtualization to a scheduling grid handling large datasets to fix scroll lag and layout flicker during live status updates.
- Work out API contracts with backend developers before building screens, covering payload shapes, validation rules, and edge cases to catch mismatches early. Write NestJS endpoints when backend work blocks frontend progress.
- Implemented JWT authentication with HttpOnly cookies for login, protected routes, and session handling.
- Shipped 8+ features over the past year, each running one to two sprints, tracked through Jira and shipped via GitLab branches, merge requests, and CI/CD, writing test cases and working with QA to confirm fixes before each release.

Frontend Developer Intern – Techstuff Private Limited — Feb 2025 – May 2025

- Built and updated small React.js/TypeScript UI components from Figma designs, with review from senior engineers before merging.
- Integrated REST APIs into a few existing screens and fixed bugs that QA found during testing.
- Learned the team's Git/GitLab workflow, including feature branches, merge requests, and review comments, while getting familiar with the codebase.

WordPress Developer – Contract (Remote) — Aug 2023 – Dec 2023

- Built and customized WordPress sites for clients using Elementor, HTML, and CSS.
- Added WhatsApp integration through WordPress plugins and handled plugin-based site features and updates.
- Made on-page SEO and performance improvements, and resolved issues clients reported directly.

KEY PROJECTS

EduMiracle — Student ERP Portal

Next.js 16 · TypeScript · MongoDB · Tailwind CSS · Recharts · Gemini AI

Independent project, built around a real NEET/JEE coaching institute's workflow

- Built solo end to end (data model, REST APIs, frontend, deployment) into a student dashboard with live attendance, Recharts-based mock test analytics, and a CBT exam simulator, on Next.js 16 with MongoDB, deployed on Vercel.
- Added Gemini AI for real-time doubt-solving, plus an admin panel with role-based access for institute staff.

Payroll & HR Platform

Next.js · TypeScript · NestJS · MongoDB · MCP (Model Context Protocol)

Enterprise project, Techstuff Private Limited

- Build and maintain frontend screens on a payroll/HR platform, covering leave, attendance, calendar, and candidate flows, on Next.js App Router against a NestJS/MongoDB backend.
- Designed a CLI/loopback OAuth-style login flow (authorize, one-time code, token exchange, refresh) on the existing NestJS auth service, and integrated an MCP server on the official SDK exposing payroll tools like leave, calendar, and candidates through that same authenticated API.
