PRATIK PATIDAR

Frontend Engineer · React.js · Next.js · SvelteKit · TypeScript

Indore, India · pratikpatidar7990@gmail.com · +91-8269647990 · LinkedIn · GitHub · Portfolio

PROFESSIONAL SUMMARY

Frontend Engineer with 1.5 years of production experience across React.js/Next.js and SvelteKit, building responsive, high-performance interfaces and owning features end to end — from Figma handoff through REST API integration to release. I also have backend exposure with Node.js/NestJS and MongoDB. Recent measurable win: cut initial JS bundle size by ~40% through lazy loading, code splitting, and dynamic imports, plus added virtualization for large datasets.

TECHNICAL SKILLS

Frontend: React.js, Next.js (SSR / App Router), SvelteKit, JS ES6+, TypeScript, HTML5, CSS3, Tailwind CSS

State & Forms: Redux, Context API, React Hook Form, Zod, Svelte stores

Backend / DB: Node.js, NestJS, MongoDB, REST API Design & Integration, JWT Authentication (HttpOnly)

Testing: Jest, React Testing Library, Manual Testing, Cross-browser Testing (Chrome, Firefox, Safari)

Performance: Lazy Loading, Code Splitting, Dynamic Imports, Virtualization, Lighthouse

Accessibility: Semantic HTML, ARIA labels, keyboard navigation, WCAG guidelines

Tools: Git, GitLab CI/CD, Vite, npm, ESLint, Postman, Figma, Jira, Agile/Scrum, Chrome DevTools

PROFESSIONAL EXPERIENCE

Frontend Engineer — Techstuff Private Limited *May 2025 – Present*

- Build features on Mercanis (see Key Projects), a B2B SaaS procurement platform, mainly in SvelteKit and TypeScript, integrating REST APIs and writing NestJS endpoints when backend work becomes the bottleneck.
- Sit down with backend developers before writing any UI code to settle REST API contracts (payload shapes, validation rules, edge cases), then build the screens in SvelteKit.
- Implemented JWT authentication end to end, from NestJS token handling to HttpOnly cookies, protected routes, and session handling on the frontend.
- Shipped 8+ features over the past year, tracked in Jira and released through GitLab branches, merge requests, and CI/CD — writing test cases and working with QA before each one goes out.

Frontend Developer Intern — Techstuff Private Limited *Feb 2025 – May 2025*

- Built React.js/TypeScript UI components straight from Figma designs, with a senior engineer reviewing each one before it merged.
- Integrated REST APIs into existing screens and fixed bugs QA found during testing, which cut down on reopened tickets in later sprints.
- Picked up the team's Git/GitLab workflow — feature branches, merge requests, review comments — and was merging production code independently before the internship ended.
- Some of the early UI components I built during this period are still in use today, carried into the production component library.

KEY PROJECTS

Mercanis — B2B SaaS Procurement Platform (Client project, Techstuff Private Limited)

SvelteKit · TypeScript · NestJS · MongoDB

- Core platform used daily by enterprise procurement and supplier-management teams — I own frontend features end to end, from Figma handoff through REST API integration to release.
- Designed and built a shared component library (20+ reusable components: forms, tables, modals, navigation) adopted across every module of the platform.
- Cut initial JS bundle size by ~40% via lazy loading, code splitting, and dynamic imports; added virtualization to a large-dataset scheduling grid to fix scroll lag.

Payroll & HR Platform — Enterprise project, Techstuff Private Limited

Next.js · TypeScript · NestJS · MongoDB · MCP (Model Context Protocol)

- Internal payroll and HR system used by the company for leave, attendance, calendar, and candidate management — I build and maintain the Next.js/TypeScript frontend against a NestJS/MongoDB backend, using Redux/Context API for state management.
- Designed a CLI/loopback OAuth-style login flow (authorize, one-time code, token exchange, refresh) on the existing NestJS auth service, then built an MCP (Model Context Protocol) server on the official SDK on top of it — exposing payroll tools (leave, calendar, candidates) so AI assistants can query and act on payroll data through the same authenticated API instead of a custom integration per tool.

EduMiracle — Student ERP Portal (personal project)

Next.js 16 · TypeScript · MongoDB · Tailwind CSS · Recharts · Gemini AI

- Built solo end to end (data model, REST APIs, React/Next.js frontend, deployment) for a real NEET/JEE coaching institute: live attendance, Recharts-based mock test analytics, and a CBT exam simulator, deployed on Vercel.
- Added Gemini AI for real-time doubt-solving, plus a role-based admin panel for institute staff.

EDUCATION

B.Tech, Computer Science & Engineering — Barkatullah University, Bhopal · CGPA: 7.89 2020 – 2024
